PRESENTATION

Inside MRN is our semiannual transparency publication. In this space, we share results, progress, challenges and commitments related to our operations in Western Pará. We gather economic, social and environmental data that help show how we seek to generate value for people, conserve the environment and conduct a responsible and sustainable operation.

MESSAGE FROM THE BOARD

THE FUTURE IS TAKING SHAPE IN WESTERN PARÁ

This edition of “Inside MRN” highlights the progress, challenges and initiatives that are shaping a new chapter in our operations in Western Pará. The region plays a strategic role in one of Brazil’s most important industries. Brazil is the world’s fourth-largest producer of bauxite and third-largest producer of alumina. In 2025, the Brazilian aluminum industry invested R\$6.8 billion and employed 508,000 people, according to the Statistical Yearbook published by the Brazilian Aluminum Association (ABAL).

Mineração Rio do Norte (MRN) has been part of this value chain for 47 years, connecting Western Pará with Brazil and the world. Our contribution begins with the responsible production of bauxite, but extends well beyond it. We are committed to fostering long-term prosperity across the region by creating jobs, supporting local suppliers, generating tax revenue and investing in social development.

As you will see in the pages ahead, the implementation of the Novas Minas Project will enable us to extend our operations for another 15 years. This new chapter brings significant opportunities while also increasing our responsibilities. Our goal is to move forward through open dialogue, safe operations and long-term planning, strengthening the regional economy and developing solutions in partnership with communities, government authorities and other local stakeholders.

Several initiatives are already helping to prepare the region for this future, including 1,200 vocational training opportunities, programs to strengthen Pará-based suppliers, and investments in education, healthcare, income generation and community development. These efforts are underpinned by our commitment to environmental responsibility, reflected in the efficient use of natural resources, the protection of biodiversity and the rehabilitation of mined areas. I invite you to explore the initiatives and results that demonstrate how we are turning our commitments into action.

Guido Germani
CEO of MRN

WHO WE ARE

We are Mineração Rio do Norte (MRN) and we have been in Western Pará for 47 years, in the heart of the Amazon.

We produce bauxite responsibly and take our production to Brazil and the world.

Our operation combines mining, care for the environment and community development.

Commitment to sustainability, ESG (Environmental, Social, Governance) principles and operational excellence (*)

ASI (Aluminum Stewardship Initiative) Performance and Chain of Custody.

Anti-bribery Management focused on integrity, ethics and prevention of corruption.

Compliance management aligned with best governance and compliance practices.

Environmental Management - prevention of impacts and continuous improvement of environmental performance.

Environmental Audit of the Port carried out in accordance with Conama Resolution 306/2022.

Gold Seal Recognition for the quality and transparency of the GHG (Greenhouse Gas) emissions inventory.

Occupational Health and Safety Management - risk prevention and protection of people.

International compliance in port security and protection of maritime facilities.

*Certifications, recognitions and current compliances

SUSTAINABILITY AS A PRIORITY

We continually advance on our sustainability journey to protect the Amazon and reduce greenhouse gases, with clear goals aligned with global agendas

BIODIVERSITY

THE FOREST IS AT THE CENTER OF OUR OPERATIONS

We operate in one of the most relevant ecosystems on the planet and we treat biodiversity as a priority.

We are aligned with the Kunming-Montreal Global Biodiversity Framework (KMGBF) and the UN Sustainable Development Goals (SDGs).

Our commitment is to evolve our practices and achieve **the goal of Zero Net Loss of biodiversity**, with 2020 as a reference.

DECARBONIZATION

ADDRESSING CLIMATE CHANGE

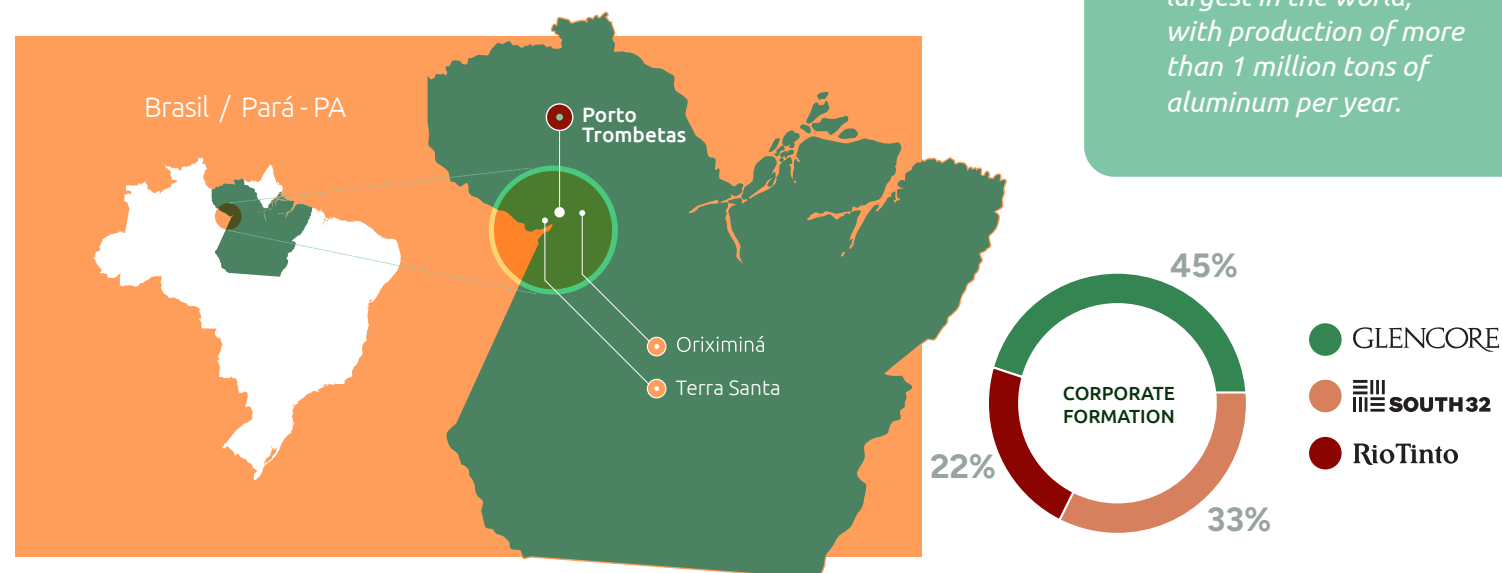

Our goal is to reduce Scope 1 and 2 greenhouse gas (GHG) emissions by 25% by 2027, based on 2024, through the transition of the energy matrix.

We also maintain the ambition to achieve **net-zero industrial GHG emissions by 2050**, contributing to a low-carbon future.

WHERE WE ARE

We are located in Pará and connected with Brazil and the world

Our headquarters are in the district of Porto Trombetas, in Oriximiná, in Western Pará, within the Saracá-Taquera National Forest. Our operational area covers the municipalities of Oriximiná, Terra Santa and Faro.

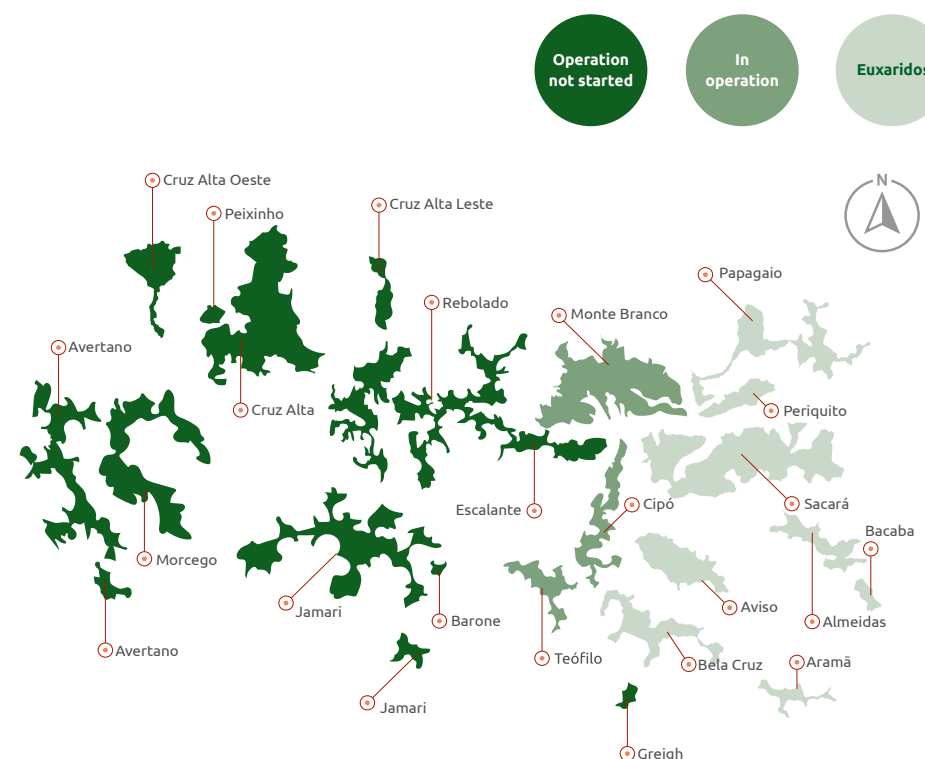

HERE THE ALUMINUM PRODUCTION CHAIN BEGINS

Bauxite is the main source for the production of aluminum, present in electronics, household items and automobiles. MRN has a strategic role in keeping the Brazilian industry among the largest in the world, with production of more than 1 million tons of aluminum per year.

WHAT WE DO

We produce bauxite, an essential raw material for aluminum. Our logistics include a 28 km railway and a port structured to transport ore.

MRN plays a strategic role in keeping the Brazilian industry among the largest in the world, with production exceeding 1 million tons of aluminum per year.

MRN IN NUMBERS

Behind each number, a commitment to the future.
47 years of socioeconomic development in Western Pará.

Data from the first half of 2026

The PNM connects production, employment, regional development and industrial competitiveness. The benefits begin in the territory, with more jobs and social investments, but its effects reach the entire aluminum chain and different sectors of the country's economy.

Guido Germani,
CEO of MRN.

PNM opens new development cycle in Western Pará

Project supports operational continuity for another 15 years, maintaining 7,5 thousand jobs and injecting more than R\$1 billion annually in taxes and purchases in the region

The Novas Minas Project (PNM) reached a defining milestone following the issuance of its Installation License in April 2026. Project implementation will expand job creation, professional training, and local economic activity across Oriximiná, Terra Santa, and Faro, in Western Pará.

With estimated investments of R\$5 billion over the next five years, the PNM should generate 2,300 jobs in the implementation phase, in addition to expanding the contracting of local goods and services and socio-environmental investments in the territory.

The PNM is very important because it opens doors for those who want to build a profession and enter the job market. With that, comes more income and dignity. We have already seen this transformation happen in communities supported by the MRN.

Marivaldo Rocha, administrative coordinator
of the Association of the Remaining
Community of Quilombo Boa Vista (ACRQBv)

PROFESSIONAL TRAINING EXPANDS OPPORTUNITIES FOR 1,200 PEOPLE

The PNM is already creating opportunities for local residents. The project's Labor Management Program (PGMO) offers 1,200 free places for people from Oriximiná, Terra Santa and Faro. Participants receive a stipend of R\$960, in a single installment, during the training.

The training, in partnership with the National Industrial Learning Service (Senai), covers areas such as civil construction, machine operation, welding and maintenance. The training period will be between July 2026 and July 2027.

"The generation of opportunities begins long before hiring. It involves qualifying people and strengthening the local capacity to meet the demands that will come", highlights Magda Damasceno, general manager of Human Resources at MRN. Today, 85% of our employees are from Pará, which strengthens the region's economy with the sustainable generation of local income.

This knowledge will help me a lot. Who knows, in some time, I will be able to go to college in Engineering. It is a dream that I am nurturing.

Cacilene Marques,
from the Aibi riverside
community, in Faro, one
of the participants in
the training program.

JOBS

- 2,300 thousand new jobs expected during implementation
- 7,700 jobs maintained (more than)

QUALIFICATION

- 1,200 free places on vocational courses
- Grant of R\$960 (one-time payment) for participants
- 14 courses in areas with high regional demand

INVESTMENTS

- R\$5 billion in five years

MAINTENANCE OF POSITIVE IMPACTS

- R\$ 727 million per year in local purchases
- R\$ 389 million annually in taxes and contributions
- R\$ 51.6 million annually in social and environmental initiatives

We overcame technical, environmental and occupational challenges with full compliance with the project requirements. This result reinforces our confidence for the next stages of implementation

Yanto Araújo,
general
manager of
Projects at MRN

90%
reduction in greenhouse gas emissions in the energy generation process with the implementation of the PLT

1,100
jobs created during construction, with 67% of workers from Pará

Energy transition project completes towers crossing the Trombetas river

PLT integrates innovative engineering solutions, environmental protection actions and social responsibility initiative

The Transmission Line Project (PLT), which will connect our operation to the National Interconnected System (SIN), reached a new milestone with the completion of the five towers crossing the Trombetas River. In June 2026, the PLT reached 63% physical completion. The project is expected to come into operation in the first quarter of 2027.

The crossing is one of the most complex stages of the project and requires specific engineering, logistics, environmental and safety solutions for the conditions in the Amazon. In total, the 230kV transmission line will be 98 kilometers long, with 232 towers between the Oriximiná substation and the future Saracá substation, in Porto Trombetas.

CHALLENGES OF PLT IN THE AMAZON

- Implementation of 232 transmission towers over the river and forest areas.
- Specialized transport of materials and large equipment.
- Approximately 50% of the entire volume of concrete, steel and metallic structures of the project in the crossing section.
- Strict adoption of measures to protect biodiversity and aquatic fauna during construction.
- Continuous dialogue with 19 communities in the area of direct influence to address concerns, mitigate and monitor socio-environmental impacts

“Agents of Good” in risk prevention

In 2026, we started the campaign “Agentes do Bem - Where there is work, there is protection”, a large mobilization to prevent sexual violence against children and adolescents in Oriximiná. The initiative is part of the Grandes Empreendimentos Program, carried out in partnership with Childhood Brasil to prevent social risks associated with large projects.

The campaign includes the distribution of educational materials, discussion groups and meetings. Workers from construction sites, suppliers and PLT partners were invited to act as protection agents in the territories where they work.

This action is part of our permanent Human Rights agenda, guided by the promotion of respect, ethics and citizenship. In the first half of 2026, the activities of the Grandes Empreendimentos Program reached 260 people in actions carried out at the Federal University of Western Pará (Ufopa), weekly onboarding sessions and community visits to our operations.

INNOVATION RECEIVES NATIONAL AWARD

A project that makes bauxite processing more efficient and predictable has received national recognition. “Bauxite Textural Geometallurgy: integrated model for process prediction and optimization”, developed by MRN in partnership with researchers from the University of São Paulo (USP), won the 28th Brazilian Mining-Metallurgical Industry Excellence Award 2026, promoted by Minérios & Minerales magazine.

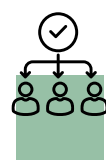

“Textural geometallurgy allows us to better understand the characteristics of bauxite and anticipate its performance. This generates efficiency gains, optimizes the use of resources and decision making”, explains geologist Felipe Antonialli, who is the project leader at MRN.

Startups receive support to develop mining solutions

MRN’s first open innovation call for proposals selected four companies to execute technology projects

The four startups selected in the first Open Innovation Cycle of the Bauxita Challenges Program advanced to the execution phase of the proposed solutions for challenges mapped by MRN. The initiative is part of the Bauxita Lab, our innovation and entrepreneurship platform applied to mining.

With our support, companies will be able to test and validate technologies through proofs of concept carried out in the operational environment. In addition to increasing the efficiency and sustainability of operations, the program stimulates the growth of startups and strengthens the innovation ecosystem in Western Pará.

COMPANIES SELECTED FOR PROOFS OF CONCEPT

- JambuLabs | Bauxite Tracking Project
- BPM Cube | Contract Management Project
- Geeco | Tailings Drying Project
- SVA Tech | Wagon Positioning Project

Participation in FIPA strengthens connections and opens up opportunities

XVII Pará Industry Fair brought together, in Belém (PA), exhibitors from different segments, business matchmaking sessions and debates on sustainability in the Amazon

Our participation in FIPA 2026, held in May, expanded the dialogue with industry representatives, businesspeople, authorities, students and families in the region. In four days, the event brought together more than 40 thousand visitors.

At the stand, the public got an immersive look at our operations, socio-environmental projects, innovation initiatives and investments aimed at the development of Western Pará. The program included business matchmaking sessions, which brought local companies from our supply chain closer together and contributed to expanding opportunities in the region.

MRN AT FIPA

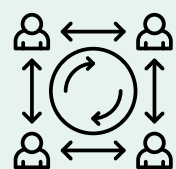

- +30 local companies participated in the business matchmaking sessions.
- Virtual reality headsets offering immersive experiences in operational areas and projects.
- An interactive digital display presented data from the biannual transparency report.
- Web series “Seeds of the Future” showed income generation and sustainability initiatives in Western Pará.

We often get to know the company via email or phone, but we don’t have direct contact with the people or the dynamics of the processes. The round brought this relationship closer together.

Michelle Ferreira, representative of MLX Uniformes, about the business matchmaking session.

RESOURCES REACH COMMUNITIES DIRECTLY

Dialogue and active listening with riverside and quilombola communities guide the definition of initiatives and contribute to resources meeting the priorities identified in the territory.

R\$ 576 thousand

in voluntary transfers, in the first half of 2026, to the Association of the Remnant Community of Quilombo Boa Vista, the Associação Mãe Domingas, which represents quilombolas from Alto Trombetas I, and the Association of Communities of Glebas Trombetas and Sapucaá (ACOMTAGS), which represents riverside and traditional communities.

R\$ 20 million

transferred to the Association of Remaining Communities of Quilombo Alto Trombetas II, in 2026, corresponding to the second installment of the Mining Results Participation Agreement (PRL) of the Monte Branco Plateau, retroactive to the period from 2013 to 2023. With the agreement, which continues until 2028, we have already transferred R\$35 million, benefiting the quilombolas of ATII.

Tax collection exceeds R\$ 200 million in the first half of the year

The payment of taxes, fees and contributions helps finance public policies and services. In the first half of 2026, our tax payments totaled R\$200.1 million, paid to the federal government, the state of Pará and the municipalities of Oriximiná and Terra Santa.

DATA FROM THE FIRST HALF OF 2026

- **R\$ 47,4 million** paid to the State of Pará in taxes, fees and CFEM
- **R\$ 117,3 million** paid to the Federal Government in taxes, fees, contributions and CFEM

Of the total collected, R\$ 60.2 million consists of taxes withheld at source

TRANSFERS TO MUNICIPALITIES

Oriximiná
R\$ 19,7 million
ISS
R\$ 5,1 million
CFEM

TOTAL:

R\$ 24,8 million

Terra Santa
R\$ 803 thousand
ISS
R\$ 9,8 million
CFEM

TOTAL:

R\$ 10,6 million

Of the total paid to the municipalities, R\$ 20.5 million consists of taxes withheld at source (ISS).

Data from January to June 2026

Stimulating the economy: R\$ 448 million in purchases in Pará

Acquisition of materials and contracting of services boost the regional economy and contribute to the generation of jobs

To strengthen the economy and boost the development of Western Pará, we continue to prioritize local suppliers. The municipalities of Oriximiná, Terra Santa, Santarém and Óbidos account, for example, for around 80% of material purchases made in the state.

DATA FROM THE FIRST HALF OF 2026

- **R\$ 391,4 million** in purchases of materials in the state of Pará.
- **R\$ 56,9 million** in services contracted from companies in Pará.
- **R\$ 10,3 million** in materials purchased from micro and small companies in Pará

**Data from the first half of 2026*

A diverse range of goods and services

In addition to fuel, we purchase parts for vehicles and equipment, cleaning products, construction materials and packaging, among other items. Among the contracted services, we highlight the leasing of goods and equipment, renovations, building maintenance, transportation, logistics, automation and instrumentation.

STRENGTHENING THE SUPPLY CHAIN

In the first half of 2026, we held meetings with commercial associations and businesspeople from Santarém, Óbidos, Oriximiná, Faro and Terra Santa to increase the participation of local companies in our supply chain.

At the meetings, we presented results and information about the implementation of the Novas Minas Project and the Transmission Line Project. This dialogue helps identify opportunities, clarify processes and improve relationships with suppliers.

Currently, 202 companies are approved as suppliers and we continue working to expand opportunities and contribute to the sustainable growth of the region.

Increasingly we encounter content in which the origin of the information is lost in the process. It is up to us, journalists, to verify the facts and ensure that society receives accurate and responsible information.

Fábio Barbosa, journalist, content producer and professor at the State Technical Education School of the State of Pará (EETEPa)

Bringing together communication professionals from different municipalities in the region is an important opportunity to exchange experiences and enhance regional journalism

Emerson Rocha, executive president of Simineral

Communications Professionals Meeting puts transparency and artificial intelligence on the agenda

Event brought together 40 journalists, communications professionals and content creators from Pará

As part of our commitment to transparent and responsible communication, in June we held another edition of the West of Pará Communications Professionals Meeting, in partnership with the Mineral Industries Union of the State of Pará (Simineral), in Santarém.

The event brought together professionals from municipalities in Western Pará and Belém to discuss the impacts of artificial intelligence on journalism, newsrooms and content production. The program included a lecture by Ben-Hur Corrêa, coordinator of Globo's AI Center and researcher at the Center for Strategy and Innovation at the Federal University of Rio de Janeiro (UFRJ), and a practical workshop led by content strategist Joice Gomes.

Learn more at

SIMINERAL COMMUNICATION AWARD

During the meeting, the 2026 edition of the Simineral Communication Award in Western Pará was launched. With submissions of works from May to November, the initiative supported by MRN recognizes journalistic productions that expand society's knowledge about mining, sustainability and the Amazonian reality.

Employment: more than 85% of workers are from Pará

Of the 1,675 employees, 1,434 come from municipalities in Pará

We ended the first half of 2026 with 7,711 direct and contractor employees in our operations. Among its direct employees, more than 85% are from Pará, with emphasis on residents of Oriximiná, Santarém, Terra Santa and Óbidos.

7,711
PROFESSIONALS

1,675 direct employees.

6,036 contractor employees.

DIRECT EMPLOYEES FROM PARÁ:

Oriximiná: **433.**

Santarém: **427.**

Terra Santa: **311.**

Óbidos: **106.**

Faro: **8.**

Other municipalities in Pará: **149.**

** data from the first half of 2026*

CONTINUING PROFESSIONAL DEVELOPMENT

In the first half of 2026, we offered 91 training courses to our employees, with 11.6 thousand participants. The training covered safety, operations, standards and strategic topics. Continuing education actions are part of our commitment to professional development and workplace safety.

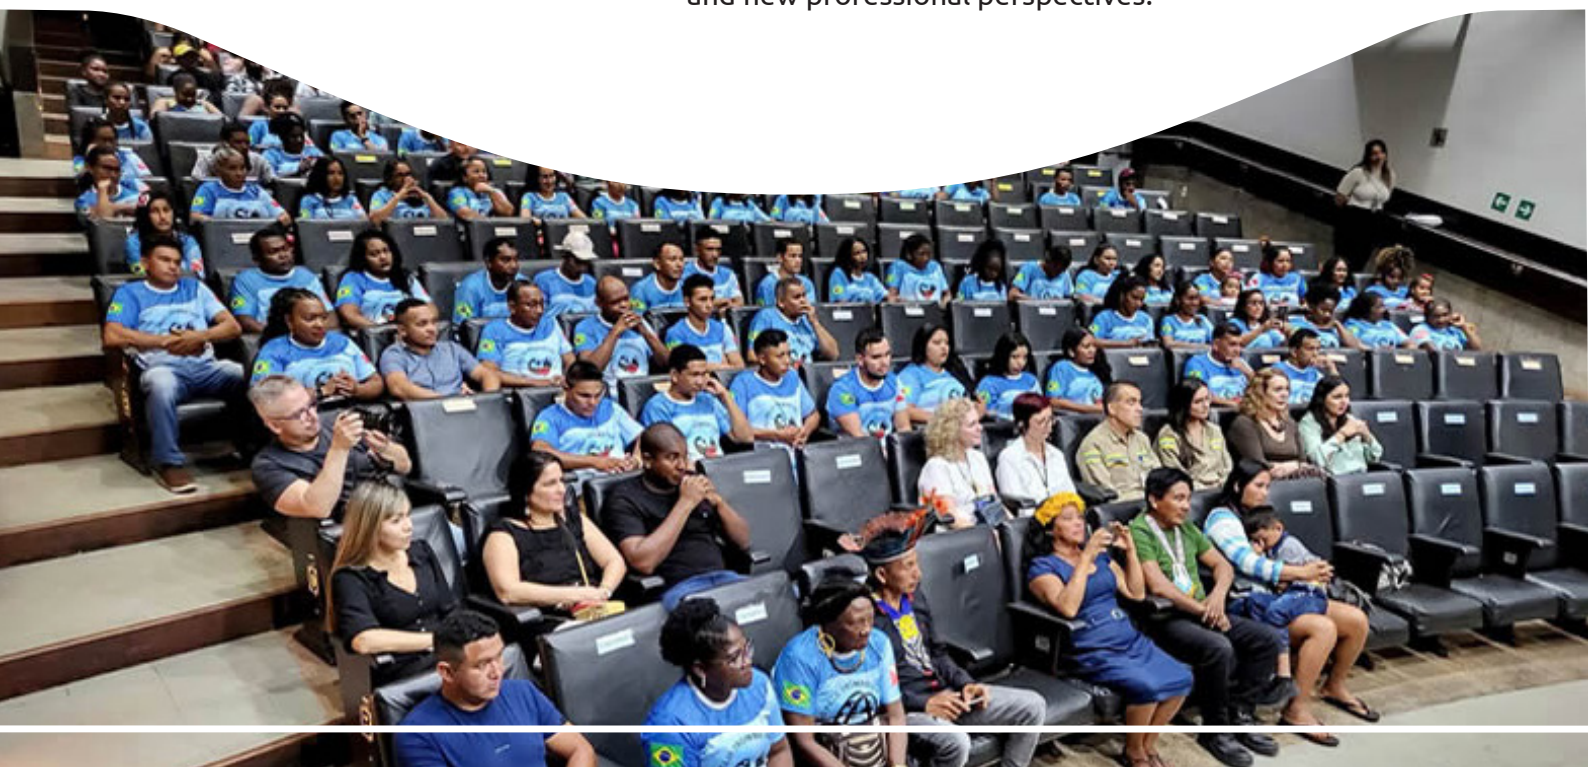

Education and training benefit more than 3,700 people in Western Pará

Initiatives expand access for quilombolas and riverside communities to formal education, workforce training, entrepreneurship and the job market

From basic education to higher education, from professional training to the first job, we invest in different paths to expand opportunities in Western Pará. Since 2020, more than 3,700 people have participated in voluntary initiatives aimed at education, workforce training and economic inclusion.

The actions reach children, young people and adults from quilombola and riverside communities in Oriximiná, Terra Santa and Faro. Beyond offering training, we seek to create conditions for knowledge to be converted into autonomy, income generation and new professional perspectives.

1

ACCESS TO EDUCATION

We support basic education and higher education students with food, transportation, school materials, scholarships and financial and logistical support

PATHS FOR DEVELOPMENT

2 EDUCATION AND QUALIFICATIONS

We offer opportunities to complete studies, professional training, open courses, obtain a driving license and prepare for new activities.

2

3 EMPLOYMENT AND PROFESSIONAL DEVELOPMENT

We create gateways for local talent through hiring, learning and training programs, associated with access to undergraduate and postgraduate courses.

3

4 ENTREPRENEURSHIP AND INCOME GENERATION

We strengthen sustainable productive activities with training, technical assistance, mentoring, seed funding and support in accessing markets.

4

- 3.7 thousand people benefited since 2020
- 987 students supported by PAEB and PAES
- 896 participants in Education for the Amazon
- 30 community residents hired by Portas Abertas

Training and employment programs expand space for local talent

Programs combine employment, education and professional development, valuing different generations and trajectories

Increasing the presence of local talent in our team is also part of the commitment to the development of Western Pará. Through initiatives aimed at community members, young people and experienced professionals, we create opportunities for entry, training and professional growth.

EXPERIENCE THAT SPANS GENERATIONS

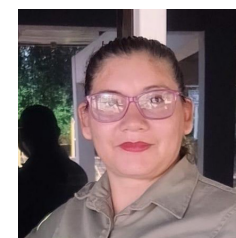

Through the “MRN Pra Todos” program, we hired naturalist João Batista Fernandes, 83 years old, who has dedicated more than four decades to knowledge of the forest. Previously working as a contractor, he joined our team, sharing experience, memory and in-depth knowledge of Amazonian biodiversity. His trajectory was recorded in the book “Wherever I Went, It Was Worthwhile”, released by MRN in 2025. “I do it out of curiosity, because I love the forest and want to understand how it works”, summarizes João Batista.

TRAINING TO START YOUR CAREER

The Jovem Aprendiz and Plurais na Amazônia trainee programs have expanded opportunities for young talents in the Northern Region. Since 2022, Jovem Aprendiz has provided training to 303 young people, between 18 and 22 years old, living in municipalities in Western Pará.

In the first cycle of the “Plurais na Amazônia” program, we selected 11 young people from Santarém, Juruti, Manaus, Nhamundá, Óbidos and Oriximiná. Seven participants were hired in 2025 and one participant in 2026, who currently work in the areas of Engineering and Geology.

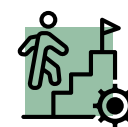

The opportunity to work at MRN represents professional growth and continuous learning for me. I feel proud to be part of an organization that values people and invests in the development of its employees.

Ana Rubia Consentini,
administrative assistant I,
resident of the Cabeceira
do Cláudio community, in
Terra Santa

More than just getting a job, I found an environment that believes in people's potential, encourages development and values each employee. Every day I have the opportunity to learn, grow and contribute to a greater purpose.

Renata Penha Godinho,
administrative assistant I,
resident of the Samaúma
II community, in Oriximiná

OPEN DOORS OFFERS EMPLOYMENT AND HIGHER EDUCATION TO 30 COMMUNITY RESIDENTS

Program combines employment, professional training and scholarships for residents of nine quilombola and riverside communities

Created to support the professional development of residents of quilombola and riverside communities, the Portas Abertas Program moved forward with the offering of undergraduate and postgraduate courses to the first 30 selected participants. In addition to the scholarship, the group receives training for the role and remuneration compatible with the activity.

In partnership with the University of Amazônia (Unama), degree programs are offered in the areas of Production Engineering, Social Work, Administration and Accounting, as well as postgraduate degrees in various topics.

From school to profession: support benefits 1,883 people

Programs expand access to basic education, higher education and qualifications in 62 communities

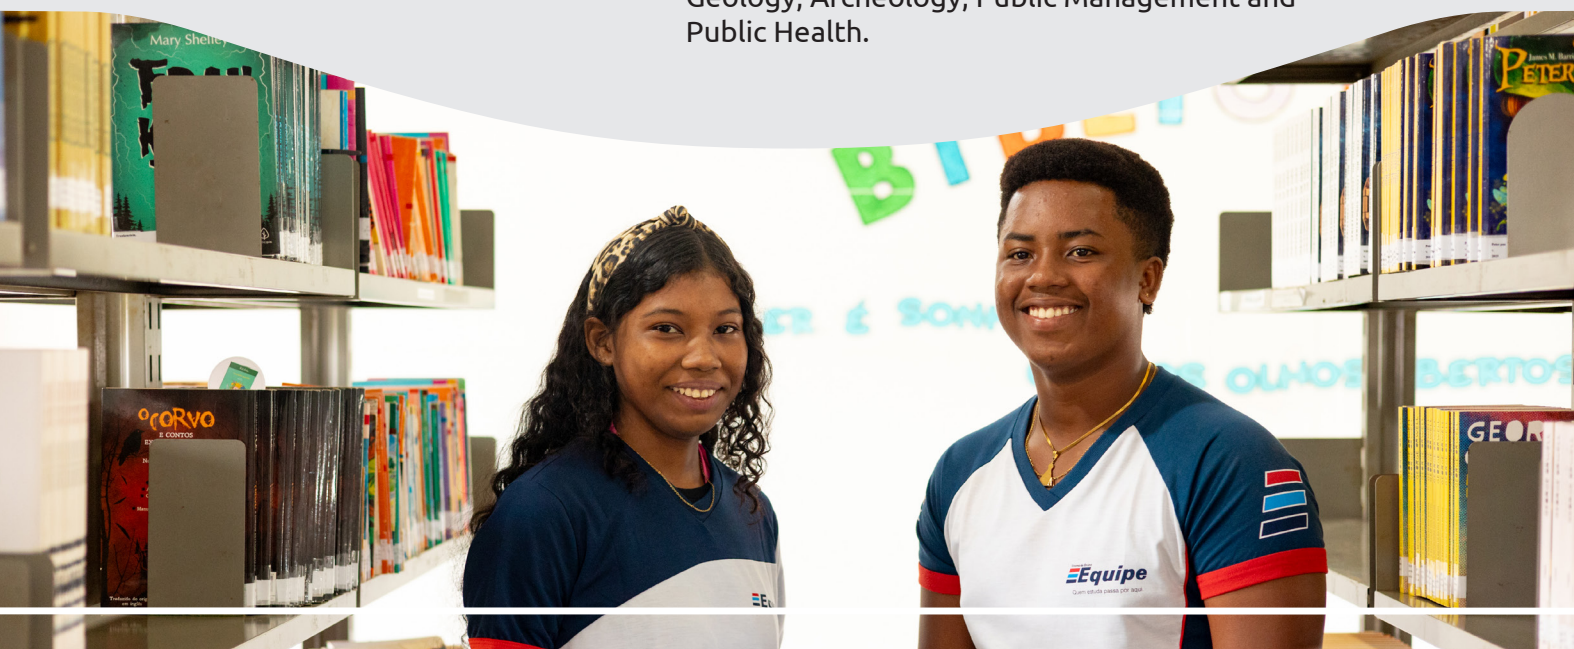

The construction of a sustainable future in the Amazon also involves expanding access to education. Supporting school retention, expanding access to university and offering job training are complementary aspects of our work. Through PAEB, PAES and the Education for the Amazon Program, we have already reached 1,883 children, young people and adults in Western Pará.

SUPPORT TO STUDY AND MOVE FORWARD

Since 2020, the Basic Education Support Program (PAEB) has served 669 students with food, extracurricular activities, river and land transport, school kits and teaching materials.

In the same period, Higher Education (PAES) covered 318 quilombolas in the Boa Vista and Alto Trombetas I and II territories, with financial and logistical support for entry, stay and completion of higher education. Participants study areas such as Civil Engineering, Pedagogy, History, Geology, Archeology, Public Management and Public Health.

R\$ 16,4
milion
invested in PAEB
and PAES between 2024 and the first half of 2026

Training for the Amazon reaches 62 communities

Program supports the completion of formal education, professional qualification, training of civilian firefighters and obtaining the National Driving License

Created in 2022, the Education for the Amazon Program has already benefited 896 people from 62 communities in Oriximiná, Terra Santa and Faro with an accumulated investment of R\$4.4 million.

158
students in Youth and
Adult Education (EJA)

348
participants in
vocational courses

REMA supports economic inclusion of 508 women

Rede Empreendedora de Mulheres Amazonidas is carried out in partnership with the Association of Working Women's Organizations of Lower Amazonas

R\$ 20 thousand
in supplies, raw materials, and equipment for 20 small businesses.

An entrepreneurship project that combines promotion, training and support for the formation of market access networks is transforming the lives of women in vulnerable situations in the municipalities of Oriximiná, Terra Santa and Faro.

Participants have access to practical workshops, lectures, accounting, legal and technical-social advice, mentoring and support for their businesses.

In 2026, the first REMA Funding Call allocated R\$20,000 in supplies, raw materials and equipment for 20 small businesses. The entrepreneurs also participated in technical mentoring and digital inclusion and management workshops.

Training of 112 seed collectors strengthens network operations

Since 2024, the Sapucaá Amazon Seed Network has expanded income generation opportunities for residents of Western Pará

With training in collecting, processing and storing seeds, we strengthen the activities of residents of the Boa Nova and Saracá communities, in the Lake Sapucaá region, in Oriximiná.

Since 2024, 112 people have already been trained to improve techniques, add value to production and expand the sale of seeds, both for MRN and for other buyers in the national market.

The project is developed in partnership with the Rural Producers Cooperative of the Jirau Environmental Observatory, the Association of Communities of Glebas Trombetas and Sapucaá (ACOMTAGS) and Redário, an organization that supports networks of seed collectors throughout Brazil.

“Maria Pixi” receives R\$1.5 million to support sustainable income

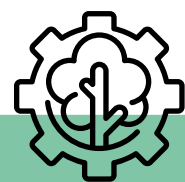

Since 2023, the project has promoted food security, economic inclusion and appreciation of traditional practices in four communities

The Maria Pixi Project has already promoted 58 training courses, with 1,189 attendances, since its creation in 2023. The initiative serves families in the São Francisco, São Sebastião, São Tomé and Espírito Santo communities and supports activities associated with food security, income generation and environmental conservation.

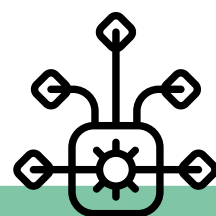

The project was structured based on a diagnosis carried out in partnership with the Association of Communities of Glebas Trombetas and Sapucaá (ACOMTAGS) and Florestas Engenharia. Activities include workshops, lectures, courses and technical visits to improve traditional practices and increase production sustainability.

In the first half of 2026 alone, we carried out 30 technical visits and six training sessions, with 330 participants. Since 2023, we have allocated R\$1.5 million to the project.

ACTIVITIES SUPPORTED

Agroforestry Systems (SAFs).

Integrated Farming, Farming and Forestry Systems (CRFs).

Community-Based Sustainable Tourism (TSBC).

Socio-environmental program supports sustainable income generation

Five of the 13 projects linked to environmental licensing develop economic inclusion actions in communities in the area of influence

The Socio-Environmental Education Program (PES) is developed in riverside, quilombola, rural and urban communities in our area of influence. Among its 13 projects, five support the generation of sustainable income and value traditional knowledge and practices. The initiatives contribute to different UN Sustainable Development Goals (SDGs).

SUPPORT PROJECT FOR AGROFORESTRY SYSTEMS (SAFS)

Strengthens sustainable family farming, increases food security and generates income.

- R\$ 306 thousand invested*;
- 37 families supported;
- 111 technical visits;
- 199 attendances in courses, workshops and farmer exchanges; and expansion of SAFS to eight more properties.

FAMILY POULTRY FARMING PROJECT

Supports the transition from fish farming to poultry farming, with a focus on income and food security.

- R\$ 279.7 thousand invested*;
- Eight families served;
- 32 technical consultancies; implementation of poultry farms and beginning of the first production cycle with delivery of chicks and inputs.

FAMILY FARMING PROJECT

Supports the cassava production chain and expands access to institutional markets.

- 306 thousand invested*;
- 16 benefited families; five farmers included in the Food Acquisition Program;
- 54 technical visits and two training sessions;
- and delivery of 13 sealers and hygiene and identification kits.

MELIPONICULTURE SUPPORT PROJECT

Strengthens the stingless bee honey production chain and the autonomy of producers.

- R\$ 211 thousand invested*;
- 25 producers served;
- 74 technical visits;
- Training; and distribution of materials, inputs and fruit seedlings.

ENVIRONMENTAL AND HERITAGE EDUCATION PROJECT

Supports the production of biojewelry and ceramics and values cultural identity and environmental heritage.

- R\$ 324.9 thousand invested*;
- 12 artisans benefited;
- 72 workshops held;
- 538 pieces produced; and delivery of 85 items of supplies and equipment and more than 10 thousand support materials.

*Data from January to July 2026

SERVICES AT HOSPITAL

14,830 consultations

10,245 emergency visits

**Data from the first half of 2026*

PROJECT EXPANDS ACCESS TO DRINKING WATER

We reinforced access to drinking water with the expansion of the water supply network in the Bom Jesus community, in the Lago Batata region, benefiting another 15 people, with an investment of R\$32 thousand. The initiative is part of the Microsystems and Artesian Wells Project and includes the construction, renovation and maintenance of water collection and distribution infrastructure.

Mobile healthcare reaches communities

In addition to the care provided by Porto Trombetas Hospital (HPTR), we support preventive care and mobile healthcare services delivered by river to communities in the Alto Trombetas I Quilombola Territory. The initiative expands access to healthcare, strengthens prevention, clinical monitoring and early diagnosis, and helps reduce public health vulnerabilities.

QUILOMBO PROJECT

- 867 medical consultations and 293 procedures
- 1,493 laboratory tests requested
- 48,311 medicines and supplies distributed
- 3,640 nursing actions
- 744 participants in health educational activities

**Data from January to July 2026*

FIGHTING MALARIA

Aiming to prevent, control, and monitor malaria and other vector-borne diseases, we implement the Malaria Control Action Plan (PACM) in Porto Trombetas, operational areas, and communities within Oriximiná, Terra Santa, and Faro.

The PACM is carried out in partnership with the Ministry of Health and state and municipal health departments, contributing to the maintenance of favorable epidemiological conditions and the reduction of malaria transmission risks.

PACM ACTIVITIES – FIRST HALF OF 2026:

- **Vector Control: 1,444** interventions at residences, housing facilities, commercial establishments, and operational areas.
- **Entomological Monitoring: 2,122** larval surveys, resulting in the identification and elimination of **238** breeding sites.
- **Health Education and Social Mobilization: 1,226** people reached
- **Prevention:** integrated actions involving monitoring, spraying, and health education.

SAFER NAVIGATION WITH PROJETO LEME

An additional 1,800 people were covered by Project Leme actions in the first half of 2026. The actions covered workshops, training, community lectures and roadside-style educational campaigns. The project reinforces care for life, responsible navigation and the commitment of everyone who lives and travels along the region's rivers.

In partnership with the Brazilian Navy, navigation safety was reinforced with the training of 122 new professionals for waterway transportation, in June 2026. The initiative marked the resumption of the Waterway Workers Training Course in Porto Trombetas after 24 years.

R\$ 211.4 THOUSAND

invested from January to July 2026

55.8 THOUSAND TURTLE HATCHLINGS RELEASED INTO THE WILD

The Pé-de-Pincha Project, which is part of our Socio-Environmental Education Program (PES), completed another cycle with the release of 55,899 turtle hatchlings back into the wild. The initiative mobilized 2,105 people.

In total, 31 communities are served by the project, which has 31 monitored turtle nesting areas. Community members participate in management activities, strengthening the conservation of Amazonian turtles.

R\$ 640.4 THOUSAND

invested from January to July 2026

ENVIRONMENTAL AWARENESS REACHES MORE THAN 850 PEOPLE

Between January and July 2026, our Environmental Education Project carried out activities in 22 quilombola and riverside communities, with the participation of 850 people. The actions addressed training community educators, solid waste management, conservation of chelonians and protection of fauna and flora. The activities reached communities in Alto Trombetas I, Lago Sapucaá, Lago Batata, Médio Rio Trombetas, Porto Trombetas, Boa Vista and Terra Santa.

R\$ 541.4 THOUSAND

invested from January to July 2026

Social inclusion projects reach more than 4,200 children and adolescents

Since 2020, sport, culture and prevention initiatives have benefited participants from Oriximiná, Terra Santa, Faro and Óbidos

Investing in childhood and adolescence is part of our commitment to the development of the territory. In Western Pará, we support projects that contribute to the holistic development of children and adolescents through sport, musical education and actions to prevent violence, drug use and teenage pregnancy.

R\$ 3.4 million invested since 2020 in the Esporte na Cidade and Orquestra Maré do Amanhã projects and in initiatives developed by the Municipal Councils for the Rights of Children and Adolescents of Terra Santa, Faro and Óbidos.

R\$ 3,4 MILLION

invested since 2020 in the projects "Esporte na Cidade", "Orquestra Maré do Amanhã" and in supporting actions developed by the Municipal Councils for Children and Adolescents of Terra Santa, Faro and Óbidos.

SPORT REINFORCES SOCIAL INCLUSION

The Esporte na Cidade project, carried out in partnership with the social organization De Peito Aberto, offers futsal, volleyball, basketball, handball and soccer in Faro, Terra Santa and Porto Trombetas. It has served more than 1,000 children and adolescents since 2020, with investments of R\$1.4 million.

ACCESS TO CULTURE

Since 2021, the Orquestra Maré do Amanhã project has been offering free music, viola and violin classes to children and teenagers enrolled at Colégio Equipe in Porto Trombetas and Comunidade Lago do Ajudante. More than 200 participants have already been served, 46 in the first half of 2026. Investments total R\$1.3 million.

HOLISTIC DEVELOPMENT

In partnership with Municipal Councils of Terra Santa, Faro and Óbidos, we have already reached more than 3 thousand children and adolescents since 2020, with projects in the areas of sport, culture and prevention of violence, drug use and teenage pregnancy. Investments in the period total R\$ 650 thousand. In the first half of the year, we allocated R\$90,000 to these initiatives.

MEETINGS WITH COMMUNITIES

- Association of Communities of Glebas Trombetas and Sapucaá (Acomtags): **10 meetings with 369 community members.**
- Quilombo Boa Vista Remaining Community Association (ACRQBV): **8 meetings with 81 community members.**
- Associação Mãe Domingas: **7 meetings with 216 community members.**
- Lago do Ajudante Residents Association: **2 meetings with 32 community members.**

**Meetings held in the first half of 2026*

Engagement meetings mobilize 698 community members

Dialogue, active listening and collaborative development of solutions guide our relationship with communities

As part of our commitment to the social license to operate, we held 27 engagement meetings in the first half of 2026, with the participation of 698 residents from local riverside and Quilombola communities.

Among the results of this dialogue is the formalization of new agreements with communities, including the Santana Cordeiro Agreement, signed with Associação Mãe Domingas, which represents quilombola communities in Alto Trombetas 1. Among the commitments are actions related to infrastructure, access to water, health, institutional strengthening and monitoring the implementation of initiatives.

VISITS REINFORCE TRANSPARENCY

In the first half of 2026, our visit program became part of the Mineração do Brasil - Portas Abertas project, carried out in partnership with the Brazilian Mining Institute (Ibram). The initiative expands access to information about mining and brings communities closer to our teams and operations.

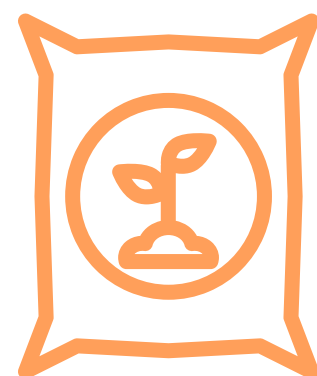

Residents of Boa Nova, Maria Pixi and Saracá participated in a new visit to MRN, expanding their knowledge about the company's activities and projects. River dwellers from the communities of N. S. do Rosário, São João, Vila Tracajá, Lero and Ajará also visited the facilities in the first half of the year.

With each participation, we expand our understanding. Technology shows greater care and reduced impacts, which contributes to a more balanced view of the activity.

Communities provide 1.9 tons of seeds for reforestation

Collectors from Boa Nova and Saracá, in Oriximiná, account for 95% of the seeds used in the production of seedlings in our Forest Nursery

Communities' traditional knowledge is essential for our Degraded Areas Recovery Program (PRAD). In the first half of 2026, collectors from Boa Nova and Saracá supplied 1.9 tons of seeds destined for the production of seedlings for reforestation.

Brazil nut, andiroba, angelim, itaúba and cumaru are among the species used. In addition to contributing to forest restoration and biodiversity conservation, the acquisition of seeds generates income for communities.

REFORESTATION IN NUMBERS

R\$ 169 thousand

allocated to the acquisition of 1.9 tons of seeds from local communities.

207.6 hectares

reforested by planting seedlings and natural regeneration.

280,035 seedlings

of 72 native tree species planted.

287,201 seedlings

produced at the MRN Forest Nursery.

75 native

species included in the production of seedlings.

8,259.97 hectares
reforested since the beginning
of PRAD.

**Data from January to July 2026*

Water quality control encompasses continuous sampling and analysis

Monitoring is essential to protect water resources, respecting the environment and local communities

Our water resources management system regularly monitors surface, groundwater and spring waters, as well as industrial liquid effluents. In the first half of 2026, we monitored a network of 236 points. The samples collected resulted in 30,700 analyses of different water quality parameters.

The results showed compliance rates between 95% and 99%. The deviations identified are associated with the natural geochemical characteristics of the Amazon region and, according to technical assessments, do not compromise the environmental quality in the monitored areas.

RESULTS SHARED WITH COMMUNITIES

As part of our commitment to transparency, we share monitoring results with residents in the region. In the first half of 2026, we held four meetings in the Saracá, Boa Nova, Boa Vista and Maria Pixi communities.

Circular economy: 856 tons of industrial waste sent for recycling

Waste tires destined for recycling or co-processing, metal scrap that returns to the steel chain and paper and cardboard transformed into new products are examples of circular economy practices in our operations. In the first half of 2026, we sent 856.13 tons of industrial waste to recycling. The volume represents 50% of the total received by the Discarded Industrial Waste Center (CRID).

438.8 TONS

of urban waste were sent to recycling and composting during the period. These materials are managed in our Urban Solid Waste Treatment Center (CTR).

CONTINUOUS AIR QUALITY MONITORING

With a rigorous control program, we continuously monitor the environmental conditions of air quality in our activities. We carry out measurements at 15 monitoring stations distributed across operational areas, which analyze parameters such as suspended particles and inhalable particles.

529

air quality samples

99%

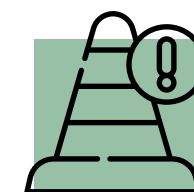

compliance rate

** Data from January to July 2026*

MEASURES ADOPTED TO DISPERSE DUST:

- **WETTING OF ROADS AND OPERATIONAL AREAS:** water trucks apply water and dust suppressant agents.

- **PREVENTATIVE ROAD MAINTENANCE:** regularization and compaction of internal roads reduce the suspension of particles.

- **CONTROL OF ATMOSPHERIC EMISSIONS:** regular inspections check the opacity of emissions from vehicles and equipment.

Communities participate in meetings on dam safety

Community briefings on the Mining Dam Emergency Action Plan guide residents on structures, procedures and safety measures

In 2026, we reinforced the mobilization to expand community participation in the community briefings on the Mining Dam Emergency Action Plan (PAEBM). With greater advance notice and coordination with leaders, the three meetings in the first half of the year brought together 101 participants.

The activities were attended by 30 residents from the Saracá community, 42 from Boa Nova and 29 from the Boa Vista quilombola territory. During the meetings, we presented information about the tailings structures and guidelines provided for in the PAEBM, in addition to distributing educational booklets.

EMERGENCY DRILLS STRENGTHEN PREPARATION AND INTEGRATION

We also carried out practical and theoretical exercises with employees and workers from contracted companies, as well as firefighters, volunteers, the Fire Department and Civil Defense of Oriximiná. The drills strengthen the preparation and integration of teams for possible emergency situations.

2 DRILLS
conducted between June 2025 and June 2026.

2 DRILLS
scheduled until June 2027.

Continuous inspections reinforce risk prevention

384 inspections were carried out at our 32 tailings structures in the first half of 2026

Our 32 tailings structures undergo biweekly internal inspections and monthly assessments conducted by qualified professionals. The checks evaluate the condition, the performance of the structures and the effectiveness of monitoring and maintenance actions. Monitoring is also carried out in real time at the Geotechnical Monitoring Center, installed at the Integrated Operations Center (COI), which operates 24 hours a day.

CONTINUOUS MONITORING OF THE 32 GEOTECHNICAL STRUCTURES FOR STORING TAILINGS AND WATER:

384 internal inspections

32 Regular Safety Inspections by Engineer of Record (EoR)

02 Periodic Dam Reviews

All 32 structures maintain Stability Condition Declarations currently valid and in compliance with legislation.
